PROJECT

Revisiting the Supernodal Floyd Warshall algorithm **November 2023 - December 2023**
Side project

- Implemented the Supernodal Floyd-Warshall algorithm from the paper <https://dl.acm.org/doi/10.1145/3332466.3374533>.
- 78 times faster than a Floyd-Warshall algorithm with a single thread.
- 17 times faster than a Floyd-Warshall algorithm with multiple threads with other optimization techniques.
- Utilized entire threads with OpenMP.
- Source is open on the github repository <https://github.com/programelot/Supernodal-Floyd-Warshall>.

Matrix multiplication on GPU **July 2022 - September 2022**
Side project

- Developed 11 matrix multiplication algorithms on CPU and GPU.
- Estimated and compared performance of each algorithms.
- Utilized the shared memory on GPU.
- Implemented Strassen's algorithm and Winograd's algorithm.
- Source is open on the github repository <https://github.com/programelot/MatrixMultiplication>.

BackRomii

Indie Game Development

July 2022

- Developed an escape game from auto generated maze with first person view.
- - Used recursive division method to generate maze.
- Optimized the game by developing an off culling algorithm.
- Developed a path finding algorithm.
- Developed in two weeks like game jam.
- Game has been released on the web. <https://aintmos.itch.io/backromii>
